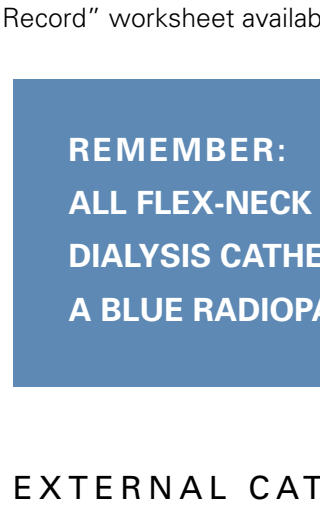
PRE-OPERATIVE MAPPING



It is highly recommended that patients who will receive a Flex-Neck Peritoneal Dialysis Catheter be pre-marked using Flex-Neck Peritoneal Dialysis Catheter implantation stencils.

Implantation stencils are templates that help choose the most appropriate primary incision site, coil location, tunnel track, and exit-site location for each patient, as well as help choose the most appropriate catheter style and size for that patient.

Implantation stencils are available for all sizes of Flex-Neck Catheters; Classic, ARC™, and ExxTended™. Sterile stencils are included with every catheter package. Contact your Merit Sales Representative to request a set of non-sterile implantation stencils.

For best results, use the implantation stencils in conjunction with the "Pre-Operative Mapping Record" worksheet available from Merit Medical.

REMEMBER:
ALL FLEX-NECK PERITONEAL DIALYSIS CATHETERS HAVE A BLUE RADIOPAQUE STRIPE.

EXTERNAL CATHETER CARE AND CLEANING

All Flex-Neck Peritoneal Dialysis Catheters are made of silicone. Cleaning agents that are compatible with silicone catheters may be acceptable for use on Flex-Neck Peritoneal Dialysis Catheters.

According to Alcavis HDC product labeling, electrolytically-produced sodium hypochlorite solutions (e.g., ExSept® Plus and Alcavis®50) are recommended for exitsite, connector, and catheter cleansing of all peritoneal dialysis catheters on the market.*
