

NvisionVLE® | Imaging System

LOW-PROFILE OPTICAL PROBE

See the bile duct more completely

See more in the biliary system using Volumetric Laser Endomicroscopy (VLE), imaging that is:

- **Subsurface:** Image up to 3 mm beneath the tissue surface
- **Volumetric:** Image 100% of the tissue over a 6 cm scan length
- **High Resolution:** 7 microns
- **Real-time:** User-controlled imaging

The **Low-Profile Optical Probe** is designed to image **beneath the bile duct surface** as part of endoscopic retrograde cholangiopancreatography (ERCP) procedures

- **Low-Profile** 7F outer diameter
- **Flexible** to navigate tortuous anatomies
- **Optimized** optics for smaller anatomies
- **Visible** under fluoroscopy

The Low-Profile Optical Probe, as part of the NvisionVLE Imaging System, is indicated for use as an imaging tool in the evaluation of human tissue microstructure, including esophageal and pancreatico-biliary system tissue microstructures, by providing two-dimensional, cross-sectional, real-time depth visualization. The NvisionVLE Imaging System is intended to provide an image of tissue microstructure. The safety and effectiveness of this device for diagnostic analysis (i.e. differentiating normal versus specific abnormalities) in any tissue microstructure or specific disease has not been evaluated. *Images courtesy of Viren Joshi, MD - Advanced Digestive Institute.*

Catalog Number	Diameter (F)	Description	Packaged
95501-LP	7	Low-Profile Balloon-less	1 unit

Before using, refer to Instructions for Use for indications, contraindications, warnings, precautions, and directions for use.
